

## The Right Way to measure your pet.

*Making 100% sure that your pet is measured correctly will ensure their ultimate comfort, your peace of mind, and an accurate quote!*

1. Having a pencil handy, stand your pet against a wall or plain, solid surface. Ensure the surface is upright and stable.
2. Make sure your pet's posture is natural, yet straight. Neck must be held comfortably.
3. Using the pencil, mark the wall at the uppermost tip of your pet's ears, the tip of the nose and the end of his back (excluding the tail).
  - a. To indicate height, measure the distance from the floor to the mark at the tip of the ears.
  - b. To indicate length, measure the distance between the nose mark and the mark at your pet's bum.
  - c. To indicate width, measure the distance between the left and the right shoulder.
  - d. An important measurement to take is the length from the pet's elbow to the floor. This is called "height from elbow joint".
4. Weighing your pet is easiest if you pick them up, and take down your weight combined with the pets' weight by using a bathroom scale. Then, accurately weigh yourself, and subtract your weight from the combined weight to get your pet's weight.
5. Accurately complete the attached form with all the details and submit to your agent for processing.

## Indicating the size of your pet.

Completing this table accurately is important in order for the whole travel process to go smoothly.

	Pet's Name	Breed / Breeds	Length	Width	Full Height	Elbow Height	Weight	Pointy Ears (yes / no)
1.			cm	cm	cm	cm	kg	
2.			cm	cm	cm	cm	kg	
3.			cm	cm	cm	cm	kg	
4.			cm	cm	cm	cm	kg
